PATENT

## Listing of Claims

 (previously presented) A method of inhibiting recurrence of a tumor in a subject, comprising:

administering a therapeutically effective amount of a monoclonal antibody obtained from hybridoma 1D11.16 (ATCC Accession No. HB 9849) to the subject in order to block an immunosuppressive effect of transforming growth factor (TGF)- $\beta$  in the subject, wherein the subject is at risk for recurrence of the tumor, and wherein the monoclonal antibody is specific for TGF- $\beta$  and neutralizes an activity of TGF- $\beta$ , thereby inhibiting recurrence of the tumor in the subject.

- 2. 5. (canceled)
- 6. (previously presented) The method of claim 1, wherein the monoclonal antibody inhibits TGF- $\beta$  from binding a TGF- $\beta$  receptor.
  - 7. (original) The method of claim 1, wherein the subject is a human.
  - 8. (original) The method of claim 1, wherein the tumor is benign or malignant.
- (original) The method of claim 1, wherein the tumor comprises a carcinoma, a sarcoma, a leukemia, a lymphoma, or a tumor of the nervous system.
- 10. (previously presented) The method of claim 1, wherein the tumor comprises a breast tumor, a liver tumor, a pancreatic tumor, a gastrointestinal tumor, a colon tumor, a uterine tumor, a ovarian tumor, a cervical tumor, a testicular tumor, a brain tumor, a skin tumor, a melanoma, a retinal tumor, a lung tumor, a kidney tumor, a bone tumor, a prostate tumor, a nasopharygeal tumor, a thryoid tumor, a leukemia, or a lymphoma.
- 11. (previously presented) The method of claim 1, wherein the monoclonal antibody is administered intravenously, subcutaneously, intradermally, or intramuscularly.

FILED VIA EFS

PATENT

- 12. (canceled)
- 13. (previously presented) The method of claim 1, wherein blocking the immunosuppressive effect of the TGF-B results in increased immunosurveillance by lymphocytes of the subject.
- 14. (original) The method of claim 13, wherein the lymphocytes comprise T cells or B cells
- 15. (original) The method of claim 13, wherein the lymphocytes include T cells, and the T cells comprise a cytotoxic T lymphocyte (CTL), a CD8+ CTL, a CD4+ cell, a CD4+ CD1d-restricted T cell, an NKT cell, or a combination thereof.
- 16 (original) The method of claim 13, wherein increased immunosurveillance is measured by an increased biological activity of the lymphocyte.
- 17. (original) The method of claim 16, wherein the increased activity of the lymphocyte is measured by a CTL assay.
- (original) The method of claim 17, wherein the CTL assay comprises a chromium 18. release assay.
  - 19. 20. (canceled)
- 21. (previously presented) The method of claim 1, wherein the monoclonal antibody inhibits TGF-B receptor signaling.
  - 22. 25. (canceled)

PATENT

 (previously presented) A method of enhancing an activity of an immune cell to inhibit recurrence of a tumor, comprising:

contacting a TGF- $\beta$  receptor-expressing immune cell with an anti-TGF- $\beta$  monoclonal antibody that is obtained from hybridoma 1D11.16 having ATCC Accession No. HB 9849, wherein the monoclonal antibody blocks a TGF- $\beta$  signaling pathway and wherein blocking the TGF- $\beta$  signaling pathway results in increased activity of the immune cell, wherein the increased activity is increased tumor immunosurveillance , thereby enhancing the activity of the immune cell to inhibit recurrence of the tumor.

- 27. (original) The method of claim 26, wherein the TGF- $\beta$  receptor-expressing immune cell is a T cell or a B cell.
- 28. (original) The method of claim 26, wherein the TGF- $\beta$  receptor-expressing immune cell includes T cells and the T cells comprise a CTL, a CD8 $^+$  CTL, a CD4 $^+$  cell, a CD4 $^+$  CD1d-restricted T cell, or an NKT cell.
  - 29. 31. (canceled)
- 32. (previously presented) A method of enhancing an immune response in a subject to inhibit recurrence of a tumor, comprising:

administering to the subject a therapeutically effective amount of an anti-TGF- $\beta$  monoclonal antibody that is obtained from hybridoma 1D11.16 having ATCC Accession No. HB 9849, wherein the monoclonal antibody blocks a TGF- $\beta$  signaling pathway and wherein blocking the TGF- $\beta$  signaling pathway results in increased tumor immunosurveillance in the subject, thereby enhancing the immune response in the subject to inhibit recurrence of a tumor.

- 33. (original) The method of claim 32, wherein the immune response is a T cell response.
- (original) The method of claim 33, wherein the T cell response comprises a CTL response, a CD8\* CTL response, a CD4\* T cell response, a CD4\* CD1d-restricted T cell response or an

.......

NKT cell response.

- 35. 37. (canceled)
- 38. (original) The method of claim 32, wherein the subject is a human.
- (previously presented) A method for screening for an agent that inhibits tumor recurrence, comprising:

contacting a TGF- $\beta$  receptor-expressing immune cell with TGF- $\beta$ ; contacting the TGF- $\beta$  receptor-expressing immune cell with an agent; and assaying for a decrease in activity of TGF- $\beta$  signaling in the TGF- $\beta$  receptor-expressing immune cell, as compared to a TGF- $\beta$  receptor-expressing control immune cell of the same type not contacted with the agent, and wherein the decrease in activity of TGF- $\beta$  signaling in the TGF- $\beta$  receptor-expressing immune cell is indicative of an agent that inhibits tumor recurrence in a subject, thereby screening for an agent that inhibits tumor recurrence.

- 40. (original) The method of claim 39, further comprising assaying for an increase in activity of the TGF- $\beta$  receptor-expressing immune cell.
- 41. (original) The method of claim 39, wherein the TGF- $\beta$  receptor-expressing immune cell is a CTL.
- 42. (original) The method of claim 41, wherein the increase in activity of the CTL is measured by a CTL assay.
- 43. (original) The method of claim 39, wherein the decrease in activity of TGF-β signaling comprises decreased phosphorylation of a Smad protein, decreased nuclear translocation of a Smad protein, or decreased DNA binding of a Smad complex.
  - 44. (original) The method of claim 40, wherein the increase in activity of the TGF-β

PATENT

receptor-expressing immune cell comprises increased immunosurveillance.

 (original) The method of claim 44, wherein increased immunosurveillance comprises increased CTL activity.
